

PROTEGO® Launches New Sizing Program

The new **PROTEGO®** sizing program is the first program available that calculates the venting requirements for normal and emergency venting of atmospheric and low pressure storage tanks according to the new **ISO 28300 Standard**.

In addition to the new ISO 28300 venting requirements the sizing program also covers calculations according to API 2000 5th Edition and TRbF 20.

The easy to use program allows the user to determine the required volume flow for both normal breathing and emergency venting of tanks according to the desired standard. It then allows the user to size the recommended **PROTEGO®** valve. The program allows the user to specify pressure/vacuum relief valves with or without flame arresters and emergency relief valves and downloads the appropriate valve data sheet from the **PROTEGO®** web site.
